

### **3. Inventory estimates for the Devolved Administrations of the UK (WP 1.3)**

The current LULUCF inventory methods use a combination of top-down and bottom-up approaches, based on activity data for each of the UK constituent countries and the UK as a whole, as described in Chapter 1. As a result of this approach, estimates of emissions and removals from LULUCF activities are automatically produced at the Devolved Administration and UK scale. The emissions scenarios used for the High, Mid and Low scenarios for each country are described in Chapter 4. The summary emissions/removals estimates 1990-2020 for each country are given in Appendix A.1 and the sectoral tables for each country are in Appendix A.3. Estimates of emissions/removals by post-1990 afforestation and deforestation activities (under Article 3.3 of the Kyoto Protocol) for each country are given in Appendix A.4.
